

BOUSSOLE Monthly Cruise Report

Cruise 50

February 28 – March 04, 2006

Duty Chief: Guislain Bécu (guislain.becu@obs-vlfr.fr)

Vessel: R/V Europe/ IFREMER

(Captain: Loïc Provost)

Science Personnel: Guislain Bécu, Dominique Tailliez, Pierre Gernez

Laboratoire d'Océanographie de Villefranche (LOV), 06238 Villefranche sur mer cedex, FRANCE

BOUSSOLE project

ESA/ESRIN contract N° 17286/03/I-OL

Deliverable from WP#400/200

March 9, 2006

Foreword

This report is part of the technical report series that is being established by the BOUSSOLE project.
BOUSSOLE is funded and supported by the following Agencies and Institutions

European Space Agency

Centre National d'Etudes Spatiales, France

National Aeronautics and Space Administration of the USA

Centre National de la Recherche Scientifique, France

Institut National des Sciences de l'Univers, France

Université Pierre & Marie Curie, France

Observatoire Océanologique de Villefranche sur mer, France

Contents

1. Cruise Objectives
2. Cruise Summary
3. Cruise Report
4. Calculated Swath paths for Meris Sensor

Appendix

Cruise Objectives

Multiple SPMR profiles are to occur within 1 hour of satellite overhead passes of MERIS around solar noon, under optimal conditions: clear blue skies and flat, calm sea surface. If the sky is clear and sea conditions are reasonably calm (no whitecaps or large swell), hand held CIMEL sun photometer measurements are to be performed consecutively where possible with SPMR profiles. If sea conditions are poor but sky is good, hand held CIMEL sun photometer measurements can be made at intervals throughout the day to measure atmospheric optical thickness. A floating platform is to be used to support the SPMR Eu sensor approximately 20cm below the surface for up to 3 minutes of stable light field before a release mechanism triggers the release of the profiler to start a descent as normal. Multiple descents ideally will be started in this way and the data will be used to assess near-surface Eu extrapolation model calculations. CTD deployments are required at the start and end of the SPMR profiling day and around noon in the longer summer days or when there is a high possibility of a satellite matchup. In addition to the depth profile from the CTD, CDOM fluorometer, Chl fluorometer and AC9, seawater samples are to be collected, filtered and stored in N₂ for HPLC pigment and particule absorption spectrophotometric filter analysis in the lab. A gimbled PAR sensor positioned on the foredeck and operated from the CTD computer serves as a light field stability indicator during SPMR profiling.

For one day of each cruise, at the end of the optics measurements on site, there will be one ctd transect between the Boussole site and the Port of Nice. This transect consists of four fixed locations on-route from Boussole and a final two station positions to be decided during the transect in order to sample on both sides of the main frontal structure between the coastal waters and Ligurian Sea. The time of day of this transect should be similar for each cruise, if possible to minimise influence of diurnal variability.

Cruise Summary

The weather was very bad for the 5 days of the cruise. Just the transect CTD profiles could be performed, as well as the buoy data retrieval (no clock lag this time!).

Tuesday 28 February 2006

Due to bad weather, only 7 CTD profiles were performed (one at boussole site, others on the usual transect to port of Nice).

Wednesday 01 March 2006

Bad weather prevented departure.

Thursday 02 March 2006

Bad weather prevented departure.

Friday 03 March 2006

Bad weather prevented departure.

Saturday 04 March 2006

Bad weather prevented departure.

Cruise Report

28 February 2006 (UTC)

- 0600 Departure from port of Nice.
- 1352 CTD 1 at buoy, with water sampling at 200, 10, 80, 70, 60, 50, 40, 30, 20, 10 and 5 meters for HPLC and Ap.
- 1352 CTD 2 at station 1 (43°25'N 07°48'E).
- 1458 CTD 3 at station 2 (43°28'N 07°42'E).
- 1555 CTD 4 at station 3 (43°31'N 07°37'E).

1658 CTD 5 at station 4 (43°34'N 07°31'E).
1756 CTD 6 at station 5 (43°37'N 07°25'E).
1756 CTD 7 at station 6 (43°39'N 07°21'E).
1910 Arrival to port of Nice.

01 March 2006

Stayed in port of Nice.

02 March 2006

Stayed in port of Nice.

03 March 2006

Stayed in port of Nice.

04 March 2006

Stayed in port of Nice.

Calculated Swath paths for MERIS Sensor (ESOV Software)

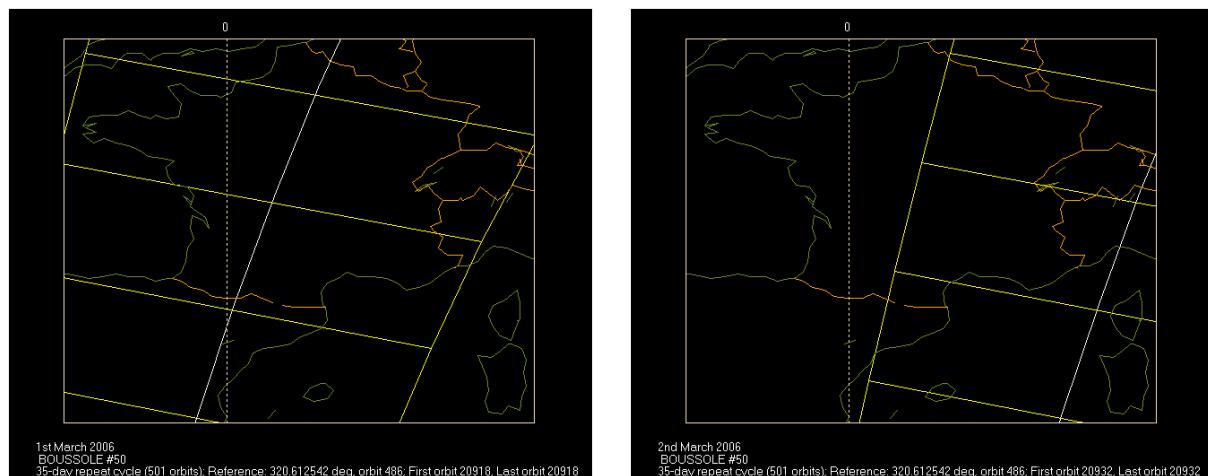

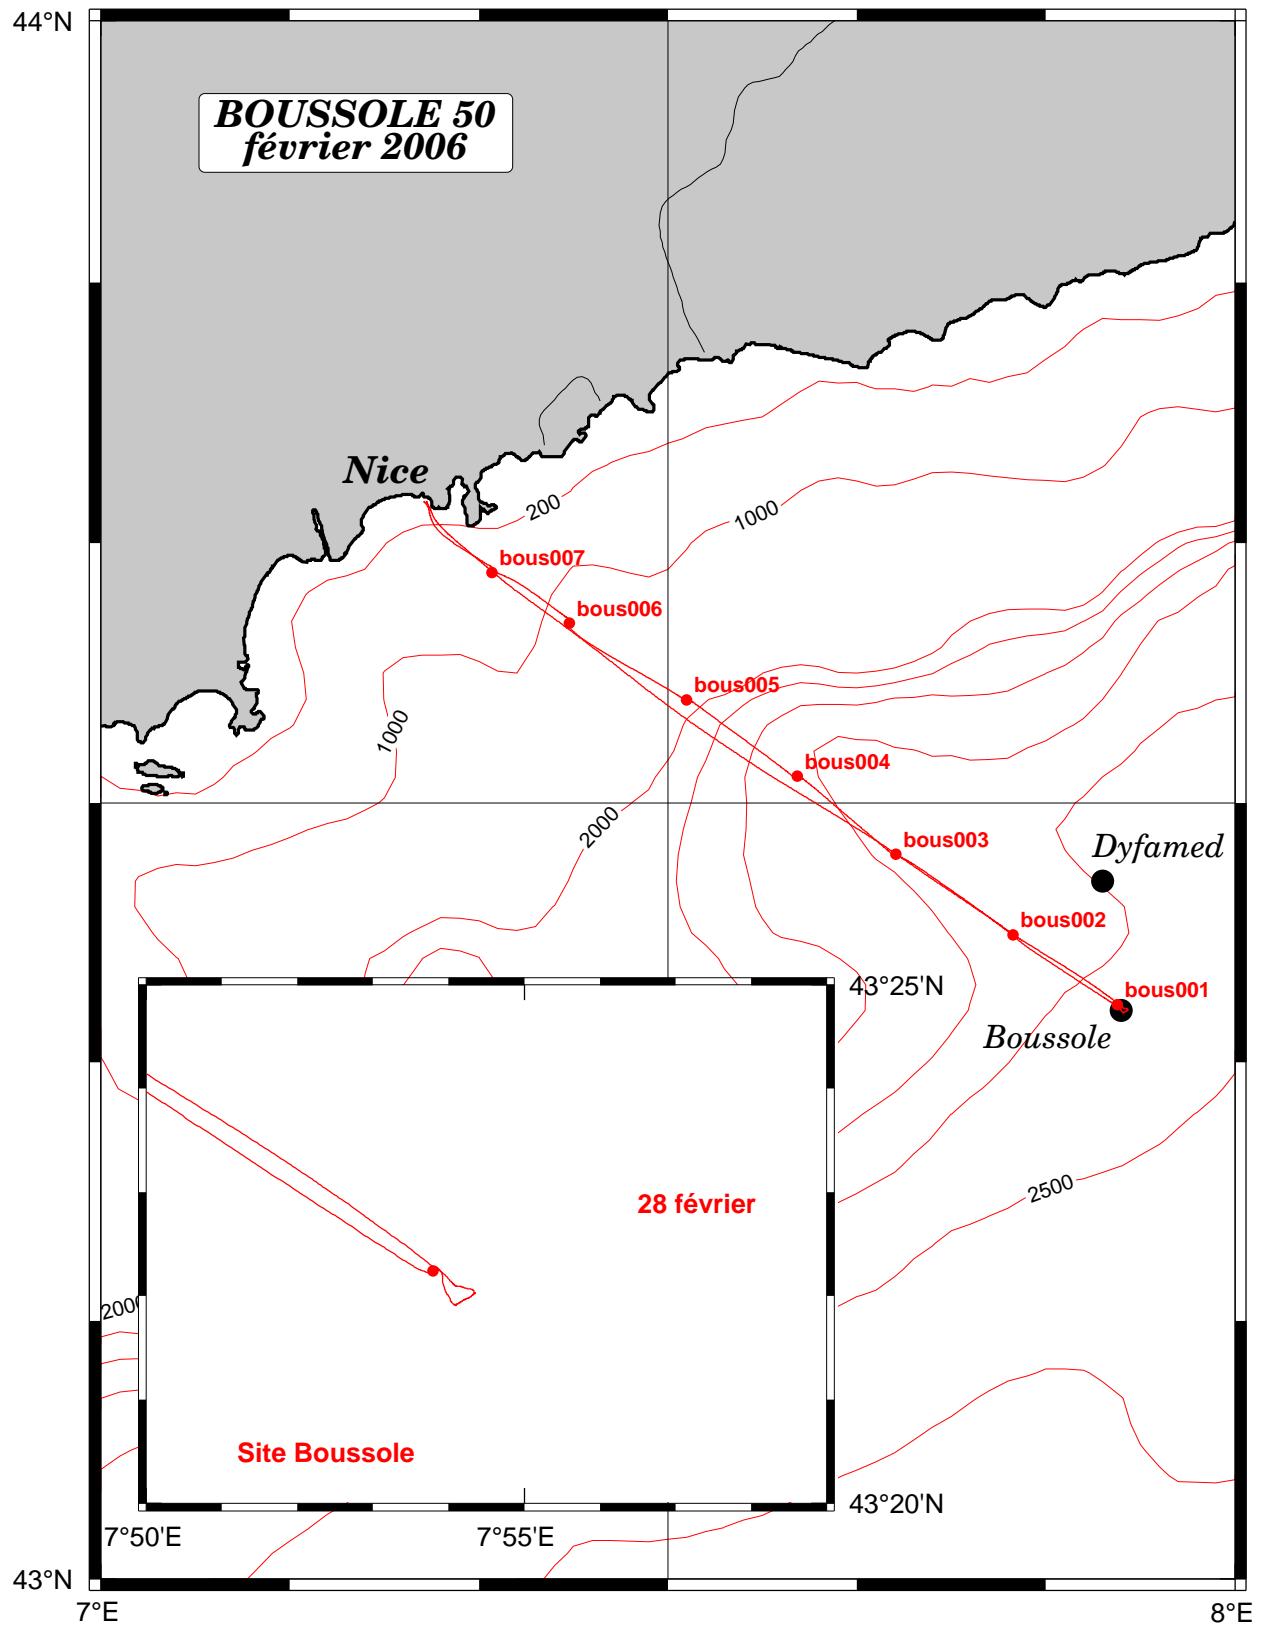

Figure 3. Calculated swath paths for MERIS (Esov software) above BOUSSOLE site for 01 and 02 March 2006.
