

Notes on the function `gsw_specvol_anom_CT_exact(SA,CT,p)`

This function, `gsw_specvol_anom_CT_exact(SA,CT,p)`, evaluates the specific volume anomaly $\hat{\delta} = \hat{v}(S_A, \Theta, p) - \hat{v}(S_{SO}, 0^\circ\text{C}, p)$ for given input values of Absolute Salinity S_A , Conservative Temperature Θ , and pressure p . The Standard Ocean Reference Salinity, S_{SO} , is 35.165 04 g kg⁻¹. This function uses the full TEOS-10 Gibbs function $g(S_A, t, p)$ of IOC *et al.* (2010), being the sum of the IAPWS-09 and IAPWS-08 Gibbs functions.

This function is simply two calls to other GSW functions, as follows,

```
t = gsw_t_from_CT(SA,CT,p);  
specvol_anom_CT_exact = gsw_specvol_anom_t_exact(SA,t,p);
```
